- Several steps towards goals of the CBD have been taken anyway, such as the Protected Species Act 2003 and the formulation of the Bermuda Biodiversity Strategy and Action Plan.
- Report by Bermuda for the 2009 UK fourth national report to the CBD is found on page 131& 132 of this document: <http://www.cbd.int/doc/world/gb/gb-nr-04-en.pdf>

APPENDIX 6: INSTITUTIONAL ARRANGEMENTS

The Department of Conservation Services

The Department of Conservation Services is responsible for species and habitat management and research, and is the coordination centre for the Bermuda Biodiversity Strategy and Action Plan (NBSAP). The Terrestrial Conservation Unit is responsible for managing government's nature reserves. Activities undertaken by the unit include invasive plant removal, rat control, habitat restoration and conservation of the historic forts in the Castle Harbour Islands Nature Reserve. The unit also undertakes monitoring and research on terrestrial species, particularly seabirds. The Department's Protected Species programme writes recovery plans for listed species and carries out other activities dictated by the Protected Species Act 2003. Officers from Conservation Services consult to the Department of Planning on conservation matters arising from proposed terrestrial and marine developments. Conservation Services is also responsible for the preservation of Bermuda's historic shipwrecks and marine heritage. The Department's GIS officer provides mapping and data management services in support of all these activities. The Department of Conservation Services operates the Government Marketing Centre to provide support services to Bermuda's farmers and the agriculture industry. Conservation Services also operates the Bermuda Aquarium, Museum and Zoo (BAMZ).

The Department of Environmental Protection

The Department of Environmental Protection is responsible for fisheries licensing, enforcement and management and research on fisheries species. The Animal Husbandry and Animal Control Sections of the department include the services of the government vet, regulation of animal importations, animal control wardens and dog licensing. The Plant Protection Lab inspects imported plant material to prevent the arrival of plant pests and assesses incoming plants for potential invasiveness. Control efforts for invasive species already present on the island is the responsibility of Conservation Services. The Department of Environmental Protection also carries out air and water quality monitoring through the services of a hydro-geologist and environmental engineer.

The Department of Parks

The Department of Parks manages, maintains and improves green spaces protected as part of the Bermuda National Parks System. These include amenity parks, the forts in those parks, public sports fields, beaches and the Bermuda Botanical Gardens and Arboretum (Parks are detailed in appendix 5). The Parks Department also operates the Government plant nursery at Tulo Valley, growing many native and endemic species.

The Department of Planning

The Department of Planning is responsible for Forward Planning and the formulation of the Bermuda Development Plans. Planning is also responsible for development control and enforcement and enforcing building codes.

The Environmental Health Division

The Vector Control team within the Environmental Health Division of the Department of Health are responsible for control of rodents and mosquitoes. There are also several local extermination companies, primarily dealing with insect pests.

The Bermuda Aquarium

The Bermuda Aquarium houses exhibits of local fish and marine species and the zoo houses a collection of animals from islands around the world, including a number of threatened species. BAMZ also operates a wildlife rehabilitation centre, dealing primarily with seabirds and sea turtles. BAMZ is accredited by the Association of Zoos and Aquariums.

The Bermuda Natural History Museum

The Bermuda Natural History Museum hosts a natural history specimen collection, library and educational exhibits.
